SELEX Communications offers expanded range of waterproof communications

SELEX Communications, a Finmeccanica company, has expanded its range of personal waterproof systems which provide effective communications in the most demanding maritime environments and can be customised to meet specific user requirements.

The company's solutions are in service with elite military forces conducting combat swimming and diving operations, jungle warfare and river-based operations. They also support effectiveness on surface platform operations by members of the civilian and defence Emergency Services.

The Operational Swimmer's Kit (OSK) features effective surface communications, submersibility up to 20 metres and a variety of waterproof headset options. A handheld or body-worn Press-To-Talk offers adjustable volume and tone controls. The range offers fully waterproof hearing protection, remote channel change and connectivity to most military and commercial radios.

The remote channel change Operational Diver Kit (ODK) provides easy access to support multi-channel communications. It is fitted with an externally remoted antenna to enhance range and performance.

Variants OSK1 and ODK1 supply a fully waterproof communications solution for non-waterproof radios by providing remote access to operate radios in the demanding maritime environment. Kits are designed to interface with most military and commercial radios by incorporating a waterproof carry bag fitted with communication ancillaries.

Variants OSK2 and ODK2 are designed for use with fully waterproof/submersible radios. These are terminated with radio-specific waterproof connectors, providing the same level of operational capability without the need for a waterproof swimbag.
